

## About the Project

Sparrows Point Container Terminal is a proposed 330-acre redevelopment project within Sparrows Point, Maryland consisting of 168 acres for a new container terminal and intermodal yard, with an additional 162 acres for support facilities to enhance operations of the terminal.

This joint venture between Tradepoint Atlantic and Terminal Investment Limited (TiL) represents a major growth opportunity for the State of Maryland and the Baltimore region. The proposed state of the art container terminal is planned to be fully electrified, including ship to shore power, and will make it one of the greenest terminals in the U.S.

## Driving Growth and Supporting Communities

The project's on-dock rail facility will serve as the closest link to the Midwest from any American port, setting apart the Port of Baltimore from the rest of the nation.

This substantial investment will increase the Port of Baltimore's container handling capacity by 70%, further ensuring that the Port will hold a substantial competitive advantage over ports along the Eastern Seaboard.

For years to come, Sparrows Point Container Terminal will support thousands of direct and indirect jobs and drive sustainable economic prosperity for the surrounding community and the state of Maryland.

## Why is this important?

There has never been a more important or pivotal time to invest in logistics and capitalize on the ability to move and receive cargo from around the world.

As the last few years have made extremely clear, expanding logistical capabilities will be increasingly important as the world becomes more connected and consumer demand for American and foreign goods grow.

States and local governments that make smart investments in logistical facilities today will make exponential gains in the future – creating jobs, protecting the environment, and growing communities.
